

To whom it may concern,

I am currently studying a Master's Degree in business analytics at UE in Madrid with a strong passion for data-driven decision.

Throughout my Master's degree, I have made a great number of projects with SQL, Python, SAS, and R. They provided me with a strong background and analytical tools designed to analyze and synthesize financial information as well as prepare documentation to help manage when making an important business decision.

The program makes emphasis on data visualization, statistical analysis, machine learning, programming and problem-solving. Additionally, it does teach about business strategy and management, as well as the ethical and legal considerations involved in handling and analyzing data. I have also gained academic experience through projects ranging from analyzing customer data to optimizing supply chain efficiency with the high-skill professors in their field.

I am quite interested in pursuing an international career in IT consulting, Business Intelligence, Supply Chains... As an open-minded person, I thrive to know about the business world as much as it is possible. Based in Madrid, I will finish my program in June, but I would like to work during my studies. Personally, I am passionate about Healthcare Industry, Renewable Energy, Banking Industry, and Utilities. However, as an open-minded student, I am also open to new sectors.

Currently I am Seeking a part-time or full-time position to apply my skills and knowledge in a challenging and dynamic business environment.

Thank you for your time and consideration of my application for this position. I look forward to hearing from you.

Best Regards,

Ivan Reyes
